Detailed Action

Response to Amendment

1. Applicant's Remarks/Arguments filed on 11/30/2009 regarding claims 3-13, 16-20 have been considered. Claims 1-2, 14-15, 21-23 have been cancelled by applicant. Claims 3-13, 16-20 are currently pending.

2. Acknowledgement is made of the amended claim 20 with respect to the 35 U.S.C. 101 rejection set forth in the previous Office action. The correction is acceptable and the 35 U.S.C. 101 rejection has been withdrawn.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

The present application relates to providing a data merge unit for providing an interleaved data stream, the data stream including data frames received on two or more input channels, wherein complete data frames from each of the two or more input channels are arranged in time-slots of the interleaved data stream, including the unique functions of:

“in which the output generator is operable in a first mode to select complete data frames in the frame merge buffer from an identified input channel and output the selected frames in a corresponding time-slot of the interleaved data stream for that input channel independently of other input channels, and, in a second mode in which complete data frames from two or more of the two or more input channels are selected from the frame merge, buffer and merged and provided in a common time-slot of the interleaved data stream.”

The present application further relates to data merge unit for providing an interleaved data stream, the data stream including data frames received on two or more input channels, wherein complete data frames from each of the two or more input channels are arranged in time-slots of the interleaved data stream, including the unique functions of:

“an output generator to generate the interleaved data stream, the output generator being configured to select complete data frames of a networking protocol from the frame merge buffer and arrange said complete data frames of the said networking protocol in the interleaved data stream, in which the input unit comprises a round-robin input arbiter arranged to service each of the two or more input channels and provide data frames therefrom to the frame merge buffer.”

The closet prior art, Alexander et al. (US Publication 2003/0002474), discloses a multi-stream merge network in which a multiplexer means is used for rearranging the received data streams into a interleaved order and providing in a time-multiplexed constant-width output data stream. However, Alexander fails to anticipate or render obvious the above quoted limitations of the present application. This renders the claims allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
